**Subject:** Sampling at DEQ sites  
**Date:** 11/06/2006 05:09 PM

---

Last Thursday we shared a list that showed where DEQ is expecting stormwater sampling to take place this year, alongside the COP and LWG proposals.

I want to clarify that only some of these sites are doing the standard JSCS sampling methodology we've been discussing (i.e., 1 grab of catch basin sediments, 4 grabs of whole water). Others are implementing some variation on the theme because they are further along in the stormwater characterization process or because they have other site specific conditions that require a modified approach. If you have questions regarding what's occurring at any specific sites, please let me know.

Karen
